ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my supervisor, Mr. Nitesh Gautam, Mrs. Manisha Prajuli, Prativa Thapa and Nawal Rijal for their valuable guidance, encouragement, and continuous support throughout this study. Their suggestions and advice helped me complete this report successfully.

I am also thankful to all the students who participated in this study and shared their experiences regarding screen use and eye health. Their cooperation provided important information for this report. Finally, I would like to thank my college friends, and family members for their support and motivation during the preparation of this study.

Josna Regmi

CHAPTER – ONE

INTRODUCTION

1.1 Introduction

Technology has become an important part of students' daily lives. Students use smartphones, laptops, tablets, televisions, and computers for education, communication, entertainment, and social networking. The amount of time spent using digital devices is commonly known as screen time.

While technology offers many benefits, excessive screen time has become a growing concern among students. Long hours of looking at digital screens can affect eye health and overall well-being. Students often experience eye strain, blurred vision, headaches, dry eyes, and difficulty focusing after prolonged screen use.

Eye problems related to digital device usage are becoming more common among school and college students. These issues may affect academic performance, concentration, and daily activities. Therefore, it is important to understand the impacts of screen time on students' eye health and promote healthy screen-use habits.

Some common eye problems caused by excessive screen time include:

1. Eye strain
2. Dry eyes
3. Blurred vision
4. Headaches

5. Difficulty focusing
6. Eye fatigue

1.2 Statement of the Problem

Excessive screen time has become a common issue among students due to increased use of digital devices for study and entertainment. Continuous exposure to screens can negatively affect eye health and create several physical and psychological challenges.

Many students spend long hours on mobile phones, computers, and tablets without taking proper breaks. This behavior increases the risk of eye problems and may affect their academic performance and daily life.

Some major causes of screen-related eye problems are:

- Long hours of screen use
- Poor lighting conditions
- Lack of regular breaks
- Improper viewing distance
- Excessive mobile phone use

- Increased online learning activities

1.3 Objectives of the Study

This study focuses on the following objectives:

- To identify the impact of screen time on eye health among students.
- To explore common eye problems experienced by students due to screen exposure.
- To understand students' screen-use habits.
- To suggest ways to reduce eye-related problems caused by excessive screen time.

1.4 Importance of the Study

This study helps BASW First Year students complete the practical research requirement.

It also helps students, teachers, parents, and researchers understand the effects of excessive screen time on eye health.

The findings may encourage students to adopt healthier screen habits and increase awareness about eye care and digital wellness.

1.5 Methodology

Area of Study

The study was conducted in Itahari Sub-Metropolitan City, Sunsari District.

Design

This study used a qualitative research design to understand students' experiences regarding screen use and eye-related problems.

Sampling

The researcher selected 8 student respondents through probability sampling. The respondents were selected because they regularly use digital devices for study and personal activities.

Data Collection

Primary data were collected through interviews and questionnaires. Secondary data were collected from books, journals, articles, and online educational resources related to screen time and eye health.

1.6 Limitations of the Study

- The study was conducted only in Itahari Sub-Metropolitan City.
- Only 8 respondents were included.
- The study used both primary and secondary sources of data.
- The findings are limited to the selected respondents and study area.

CHAPTER – TWO

DATA PRESENTATION AND ANALYSIS

2.1 Presentation of Data

2.1.1 Demographic Profile of Respondents by Gender

S.N	Gender	No. of Respondents	Percentage (%)
1	Male	10	37.5%
2	Female	5	62.5%
3	Others	0	0%
	Total	15	100%

Table 1: Out of the total respondents, 66.7% were male and 33,3% were female.

2.1.2 Average Daily Screen Time

S.N	Screen Time	No. of Respondents	Percentage (%)
1	Less than 2 hours	1	12.5%
2	2–4 hours	2	25%
3	4–6 hours	3	37.5%

4	More than 6 hours	2	25%
Total		8	100%

Table 2: Most students spend 4–6 hours daily on digital screens.

2.1.3 Common Eye Problems Experienced

S.N	Eye Problems	No. of Respondents	Percentage (%)
1	Eye Strain	6	40%
2	Dry Eyes	4	26.7%
3	Headache	3	20%
4	Blurred Vision	2	13.3%
Total		15	100%

Table 3: Eye strain was found to be the most common problem among respondents.

2.1.4 Major Effects of Excessive Screen Time

S.N	Effects	No. of Respondents	Percentage (%)
1	Reduced Concentration	4	26.7%
2	Eye Fatigue	6	40%
3	Sleep Disturbance	3	20%

4	Academic Difficulty	2	13.3%
Total		15	100%

Table 4: Eye fatigue was reported as the major effect of excessive screen time.

2.2 Analysis of Data

- male respondents were higher in number than female respondents.
- Most students spent more than four hours daily using digital devices.
- Eye strain was the most common eye-related problem.
- Excessive screen time caused eye fatigue and reduced concentration.
- Students who spent longer hours on screens reported more eye discomfort.
- Poor screen-use habits contributed to sleep and academic difficulties.

2.3 Major Findings

- Excessive screen time is common among students.
- Eye strain and eye fatigue are major health concerns.
- Most students do not take regular breaks while using digital devices.
- Long screen exposure negatively affects concentration and sleep quality.
- Awareness regarding proper eye care is limited among students.

CHAPTER – THREE

SUMMARY, CONCLUSION AND RECOMMENDATIONS

3.1 Summary

This study examined the impacts of screen time on eye problems among students. Data were collected from eight respondents through interviews and questionnaires.

The study found that students spend considerable time using smartphones, computers, and other digital devices. As a result, many students experience eye strain, dry eyes, headaches, blurred vision, and eye fatigue.

The findings indicate that excessive screen exposure can affect students' eye health, concentration, sleep quality, and academic performance. Proper awareness and healthy screen-use practices are necessary to reduce these negative effects.

3.2 Conclusion

Screen time has become an unavoidable part of students' daily lives. Although digital devices support learning and communication, excessive use can lead to various eye-related problems.

The study concludes that prolonged screen exposure contributes to eye strain, eye fatigue, headaches, and reduced concentration among students. Therefore, students should adopt healthy digital habits and follow proper eye-care practices to protect their vision and overall well-being.

3.3 Recommendations

- Limit daily screen time whenever possible.
- Follow the 20-20-20 rule while using digital devices.
- Maintain proper distance from screens.
- Use appropriate lighting while studying.
- Take regular breaks during screen use.
- Increase awareness about eye health among students.
- Encourage outdoor activities and physical exercise.
- Conduct regular eye examinations.
- Schools and colleges should organize awareness programs on digital wellness and eye care.

ANNEX

Questionnaire

Information of respondents

1. Name:
2. Age:
3. Gender:

1. What is your age?

A. Below 8 years B. 8–10 years C. 11–13 years D. 14–16 years

2. What is your gender?

A. Male B. Female C. Other D. Prefer not to say

3. How many hours do you spend on screens daily?

A. Less than 1 hour B. 1–2 hours C. 3–4 hours D. More than 4 hours

4. Which device do you use most often?

A. Smartphone B. Tablet C. Computer/Laptop D. Television

5. What do you mainly use screens for?

A. Studying B. Gaming C. Social media D. Watching videos

6. Do your eyes feel tired after using screens?

A. Never B. Rarely C. Sometimes D. Often

7. How often do you experience eye strain?

A. Never B. Rarely C. Sometimes D. Frequently

8. Do you experience headaches after prolonged screen use?

A. Never B. Rarely C. Sometimes D. Often

9. Do your eyes become dry while using screens?

A. Never B. Rarely C. Sometimes D. Often

10. Do you experience blurred vision after screen use?

A. Never B. Rarely C. Sometimes D. Often

11. How close do you usually hold your screen?

A. Less than 20 cm B. 20–30 cm C. 30–50 cm D. More than 50 cm

12. Do you take breaks while using screens?

A. Always B. Often C. Sometimes D. Never

13. Do you use screens before going to sleep?

A. Never B. Rarely C. Sometimes D. Every day

14. Have you ever been diagnosed with an eye problem by a doctor?

A. Yes B. No C. Not sure D. Prefer not to say

15. Do you think screen time affects your eye health?

A. Strongly agree B. Agree C. Disagree D. Strongly disagree
